

# CONFIGURATIONS GUIDE

How your company can benefit

## OVERVIEW

Security technology continues to improve and can provide additional layers of functionality that work in conjunction with people flow and production within your facilities.

At ivelah, we are committed to helping you explore the benefits of implementing new access control and video surveillance configurations. By utilizing system integrations that are specific to your unique business environment, we are able to create solutions that extend far beyond conventional security.

This tool will provide you with the types of configurations that are most commonly overlooked including:

- **Employee Safety**
- **Visitor Management**
- **Production & Quality**
- **Logistics & Transport**
- **Brand Protection**
- **Network Security**

## COMMITMENT TO EXCELLENCE

At ivelah we take the time to understand your overall business initiatives. This allows us to design & deploy traditional access control & video surveillance technologies in both traditional and non-traditional ways, aligning our solutions directly to your goals.

By delivering consistent, exceptional solutions our goal is to be your go-to trusted security partner at all of your facilities – current and future.

**How can  
we help  
your team  
succeed?**

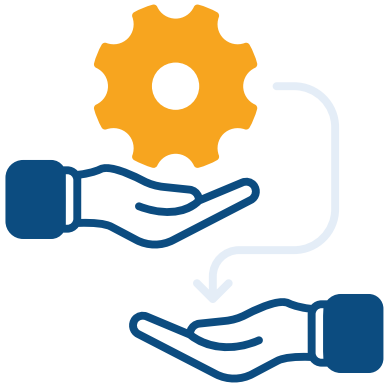

Contact ivelah, the security expert committed to understanding your business.

# EMPLOYEE SAFETY

Configure video analytics & access control reporting more effectively

## The majority of video surveillance systems have some level of configuration; even the most basic parameters can be set up

- Create directional flow alarms for vehicles and people. Be notified when infringements occur.
- Make better use of motion detection, and create event notifications when extraordinary motion occurs.
- Integrate video surveillance system with access control, automatically tagging access control alarms with associated video from local cameras.

## Does your video system have more extensive features? Safety can be further enhanced by using the Video Management Software effectively.

- Automatically detect face mask in required.
- Streamline people tracing and known/unknown face detection configurations.
- Use the change of scene setups to be notified when a typical video scene changes.

## Enterprise level access control offers reporting & dynamic event management

- Program your access control with 2-person card read before allowing access to restricted areas.
- Combine your safety training with access card credentialing, permitting access to equipment or areas if appropriate training is completed.
- Generate notifications where access cards have not been used for a determined period of time.

# VISITOR MANAGEMENT

Systematic visitor management protocols & policies

**A visitor management system can be integrated directly into your access control.**

- Implement reusable and auto-expiring access cards for vendor/visitor.
- Record areas accessed by vendor/visitor and introduce "card read required" by company representative who is accompanying vendor/visitor.
- Use printed vendor/visitor identification labels where printed information will erode after a predetermined period of time.

# PRODUCTION & QUALITY

Improved performance with surveillance & access control event management

**Your security system can be so much more! Consider new ways it can be an integral part of your business.**

- Position cameras over production areas, and use analytics to report manufacturing mistakes or production line bottlenecks as they happen.
- Automate temperature pre-screening to production areas, using technology that integrates with your video surveillance platform.
- Achieve connectivity between production line and access control. Create input alarms that will tag production line incident(s) with local video camera.

# LOGISTICS & TRANSPORT

Improve convenience & reduce loss with usable video

**Improving video quality and maximizing perimeter communications will save you time and money.**

- Create virtual vehicle flow zone to capture/identify license plates on video.
- Maximize video analytics on loading bays to report adverse instances, left object(s), and loitering.
- Integrate your intercoms at gates and barriers with your video surveillance to auto tag images with communication.

# BRAND PROTECTION

Rethinking conventional security strategies

**Consider how the investment you make in your security systems protects your brand.**

- Restrict and configure access to intellectual property with appropriate access card credentialing.
- Expand full analytic capability of video surveillance and incorporate behavioral algorithms at your locations.
- Develop a Security Standards document that includes a chapter on Brand Protection detailing how security technologies will help.

# NETWORK SECURITY

Manage camera choice without compromising your network

**Your networks can be compromised by the security technology you currently use.**

- Introduce a device add protocol for security cameras; avoid using compromised security equipment.
- Develop a Security Standards document, and mandate vetted security system technology types.
- For multi-site applications, use enterprise level solutions.

Deployed with your IT objectives in mind, ivelah will ensure your access control system functions correctly within your organizational and network typography. We have the technical know-how and the right solution that will work everywhere in your business. Schedule a discovery call with our team so we can determine what access solutions are going to best fit your needs.

Our goal is to ensure your needs, objectives, and challenges are all accounted for. Contact us today to speak with one of our consultants. We are eager to rally around your security needs!

## ivelah IS COMMITTED TO DOING WHAT'S RIGHT FOR YOU

### the right choice

Make better-informed security decisions on what equipment to use in your security designs & technologies.

**Access Control**  
**Video Surveillance**  
**Perimeter Security**  
**Critical Integrations**

### the right process

Ensure your deployment & ongoing system management is running efficiently & in a cost-effective manner.

**Technology Choice**  
**Deployment Practices**  
**Reduce Cost of Ownership**  
**Scalable Solutions**

### the right connects

Maximize the benefits your security system offers while connecting seamlessly to other business critical systems.

**Human Resources**  
**Finance**  
**Compliance**  
**Information Technology**

### the right support

Finally a support solution customized around you, your business needs, & budget.

**Comprehensive Service Plans**  
**Synchronized Warranties**  
**System Longevity Planning**  
**Managed Services**
